RoHS Compliant
TX-1310/RX-1490 , Bi-directional , Point to Multipoint (ONU)
2×5 Pigtail SC Connector, 3.3 V
GE-PON Transceiver , 1000BASE-PX20-U, 20km

Features

- Compliant with IEEE 802.3ah 1000BASE-PX20-U
- Industry standard 2×5 footprint
- SC connector
- Single power supply 3.3 V
- Differential LVPECL inputs and outputs
- Transmitter burst mode and Receiver continuous mode
- Compatible with solder and aqueous wash processes
- Class 1 laser product complies with EN 60825-1

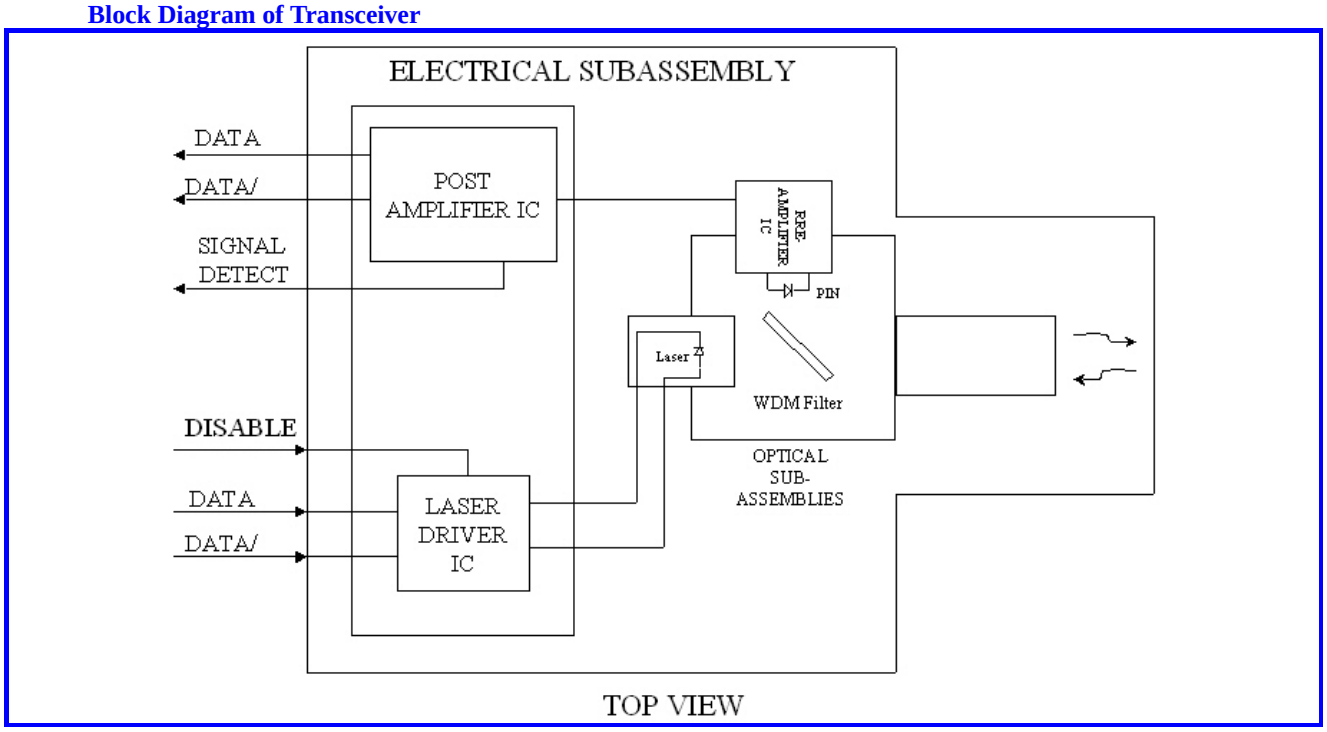
Block Diagram of Transceiver



Transmitter and Receiver Optical Sub-assembly Section

A 1310 nm InGaAsP laser and an InGaAs PIN photodiode integrate with an WDM filter to form a bi-directional single fiber optical subassembly (OSA). The laser of OSA is driven by a LD driver IC which converts differential input LVPECL logic signals into an analog laser driving current. And, The photodiode of OSA is connected to a circuit providing post-amplification quantization, and optical signal detection.

Transmitter Disable/Burst off

Transmitter Disable/Burst off is a LVTTL control pin. To disable the module, connect this pin to +3.3 V LVTTL logic low “0”. While, to enable module connect to LVTTL logic high “1”.

Receiver Signal Detect

Signal Detect is a basic fiber failure indicator. This is a single-ended LVTTL output. As the input optical power is decreased, Signal Detect will switch from high to low (deassert point) somewhere between sensitivity and the no light input level. As the input optical power is increased from very low levels, Signal Detect will switch back from low to high (assert point).

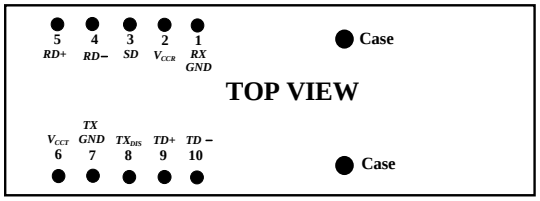
Connection Diagram

Pin-Out



Pin	Symbol	Description
1	*RX GND*	Receiver Signal Ground, Directly connect this pin to the receiver ground plane.
2	V_{CCR}	Receiver Power Supply Provide +3.3 Vdc via the recommended receiver power supply filter circuit. Locate the power supply filter circuit as close as possible to the V_{CCR} pin.
3	*SD*	Signal Detect. Normal optical input levels to the receiver result in a logic “1” output, V_{OH}, asserted. Low input optical levels to the receiver result in a fault condition indicated by a logic “0” output V_{OL}, de-asserted. Signal Detect is a single-ended LVTTL output. If Signal Detect output is not used, leave it open-circuited.
4	*RD–*	Receiver data output. AC coupled output
5	*RD+*	Receiver data output. AC coupled output
6	V_{CCT}	Transmitter Power Supply Provide +3.3 Vdc via the recommended transmitter power supply filter circuit. Locate the power supply filter circuit as close as possible to the V_{CCT} pin.
7	*TX GND*	Transmitter Signal Ground Directly connect this pin to the transmitter signal ground plane. Directly connect this pin to the transmitter ground plane.
8	TX_{off}	Transmitter Enable/Burst on Connect this pin to LVTTL logic high “1” to enable transmitter. To disable module connect to LVTTL logic low “0”.
9	*TD+*	Transmitter Data In Input internally biased and AC coupled
10	*TD–*	Transmitter Data In-Bar Input internally biased and AC coupled

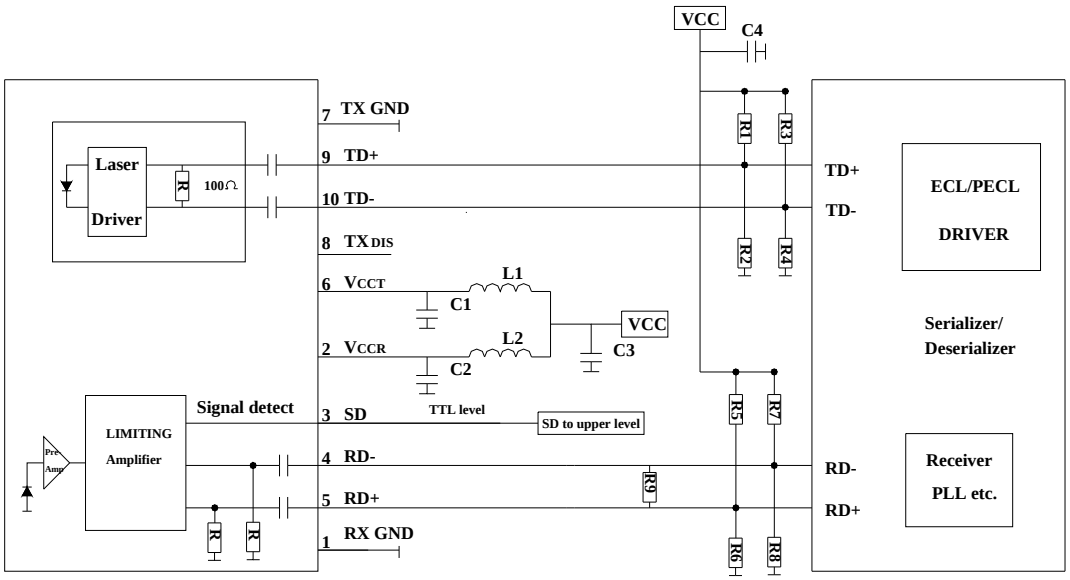
Recommended Circuit Schematic



*C*1/*C*2/*C*4 = 100 nF *C*3 = 4.7 μF *L*1/*L*2 = 1μH

*R*1/*R*2/*R*3/*R*4/*R*5/*R*6/*R*7/R8/*R*9 Depend on SerDes

In order to get proper functionality, a recommended circuit is provided in above recommended circuit schematic. When designing the circuit interface, there are a few fundamental guidelines to follow.

(1) The differential data lines should be treated as 50 Ω Micro strip or strip line transmission lines. This will help to minimize the parasitic inductance and capacitance effects. Locate termination at the received signal end of the transmission line. The length of these lines should be kept short and of equal length.

(2) For the high speed signal lines, differential signals should be used, not single-ended signals, and these differential signals need to be loaded symmetrically to prevent unbalanced currents which will cause distortion in the signal.

(3) Multi layer plane PCB is best for distribution of V_{CC}, returning ground currents, forming transmission lines and shielding, Also, it is important to suppress noise from influencing the fiber-optic transceiver performance, especially the receiver circuit.

(4) A separate proper power supply filter circuits shown in Figure for the transmitter and receiver sections. These filter circuits suppress V_{CC} noise over a broad frequency range, this prevents receiver sensitivity degradation due to V_{CC} noise.

(5) Surface-mount components are recommended. Use ceramic bypass capacitors for the 0.1 μF capacitors and a surface-mount coil inductor for 1 μH inductor. Ferrite beads can be used to replace the coil inductors when using quieter V_{CC} supplies, but a coil inductor is recommended over a ferrite bead. All power supply components need to be placed physically next to the V_{CC} pins of the receiver and transmitter.

(6) Use a good, uniform ground plane with a minimum number of holes to provide a low-inductance ground current return for the power supply currents.

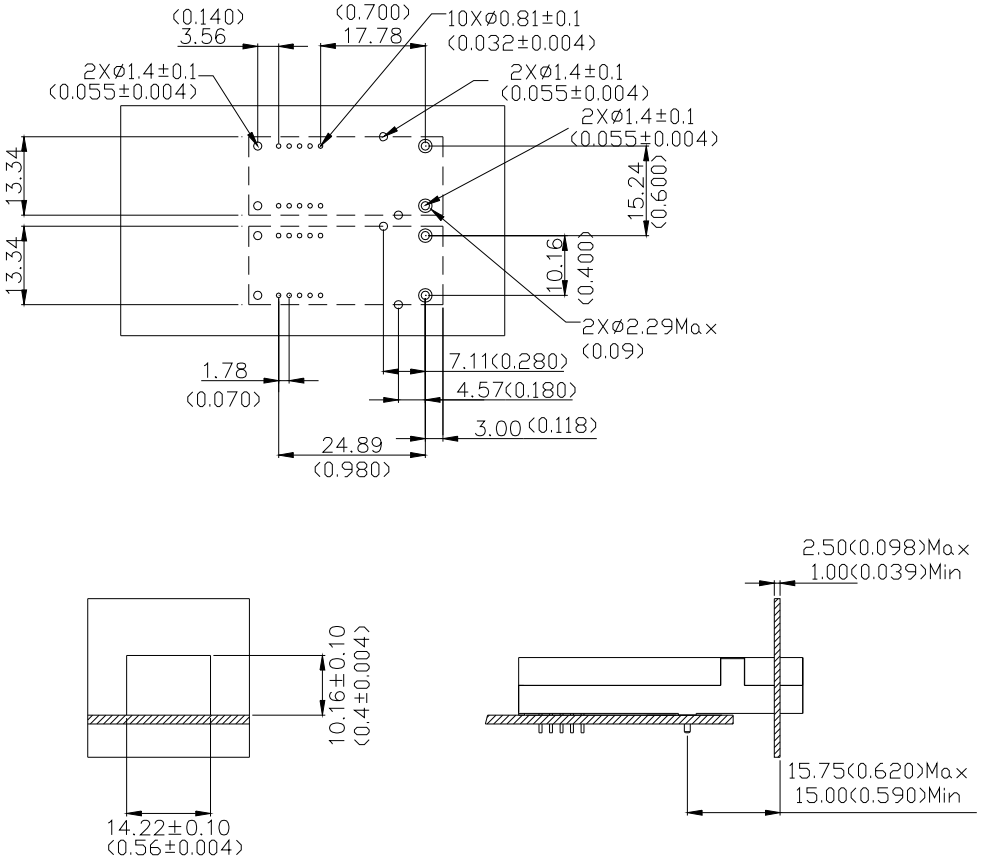
GE-PON Transceiver , 1000BASE-PX20-U, 20km

Recommended Board Layout Hole Pattern



Unit : mm(inches)

This transceiver is compatible with industry standard wave or hand solder processes. After wash process, all moisture must be completely remove from the module. The transceiver is supplied with a process plug to prevent contamination during wave solder and aqueous rinse as well as during handling, shipping or storage.

Solder fluxes should be water-soluble, organic solder fluxes. Recommended cleaning and degreasing chemicals for these transceivers are alcohol's (methyl, isopropyl, isobutyl), aliphatics (hexane, heptane) and other chemicals, such as soap solution or naphtha. Do not use partially halogenated hydrocarbons for cleaning/degreasing.

Eye Safety Mark

The Single mode transceiver is a class 1 laser product. It complies with EN 60825-1 and FDA 21 CFR 1040.10 and 1040.11. In order to meet laser safety requirements the transceiver shall be operated within the Absolute Maximum Ratings.

Caution
All adjustments have been done at the factory before the shipment of the devices. No maintenance and user serviceable part is required. Tampering with and modifying the performance of the device will result in voided product warranty.

Required Mark

Class 1 Laser Product
Complies with
21 CFR 1040.10 and 1040.11
